

KEOFITT Plastic sleeve for Aseptic Sampling System

ART. NO. 260225

GENERAL

When handling glass bottles, there is always a risk that it may break. The new plastic sleeve offers convenience and also protects the bottle during handling and transport.

The plastic sleeve is a convenient and safe stand/holder for the KEOFIT Aseptic System with 1000 & 2000 ml bottles.

The top part of the plastic sleeve (black) is autoclaved together with the Aseptic System and bottle and after autoclavation the bottom part of the plastic sleeve (transparent) is screwed on to the top part.

It is important that the transparent part of the plastic sleeve is not autoclaved as the material is PVC which will get brittle after autoclavation.

The plastic sleeve is also available for 500 ml bottles, article no 260125.

FEATURES

The top part is attached to the bottle and Aseptic System while the bottom part is screwed on to the top part after autoclavation of the Aseptic System.

CERTIFICATION

- N/A

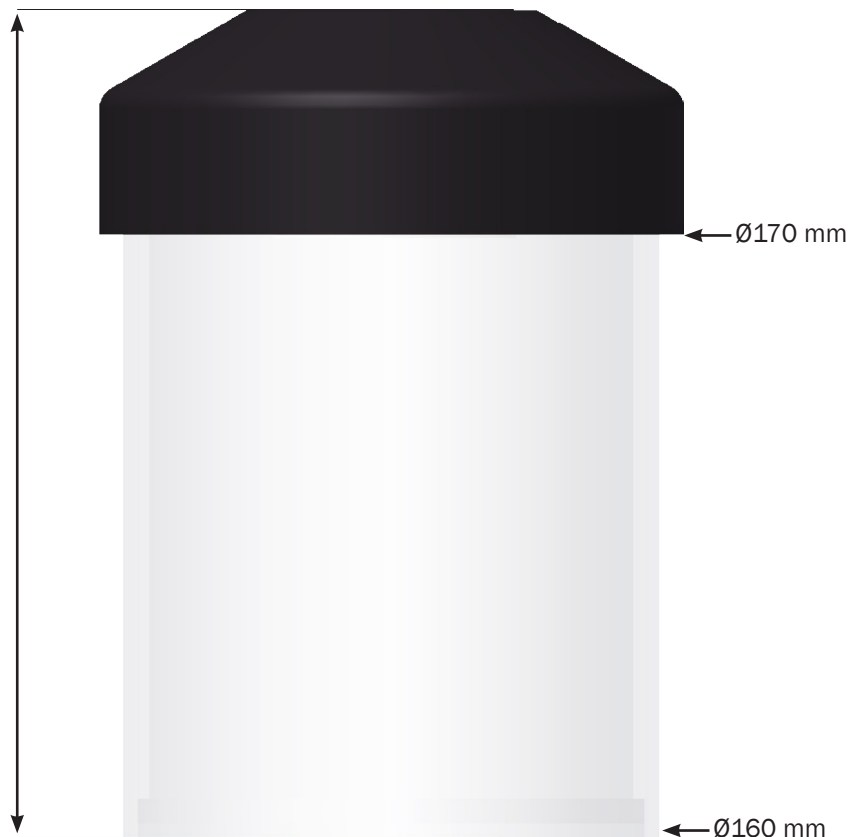

TECHNICAL DATA

Material (without process contact)

- Top part (black) POM C
- Bottom part (transparent) PVC
